

Motorized Brushes – Clarifier Cleaner

Description:

The Motorized Rotary brush Brushtec is the ideal equipment for maintaining a clean clarifier. The brush can be installed horizontally or vertically depending on the configuration of the water treatment installation.

Because it operates automatically, Brushtec increases the treatment system's efficiency. Many European facilities have had significant productivity gains from using Brushtec.

Operating Mode:

Brushtec is an easy and efficient solution for the cleaning of clarifiers in treatment plants. Brushtec rotates around the clarifier, thus ridding the clarifier's entire surface of debris, even algae.

Because it is custom-built, Brushtec is highly performing, requiring only 1 or 2 rotations per cleaning session. In large clarifiers, Brushtec is positioned in two separate locations. [The Vertical Brushtec can be adapted to smaller clarifier].

Specifications

- 150 to 1500mm (6" to 60")

BENEFITS

- Little to no maintenance
- Significant productivity gains
- Improve employees' sanitary conditions
- Brushes easy to replace
